

EXPENSE TRACKING SYSTEM

FULL-STACK PERSONAL FINANCE TRACKER USING
STREAMLIT AND FASTAPI

Presented by Vaibhav Garg

Problem Statement

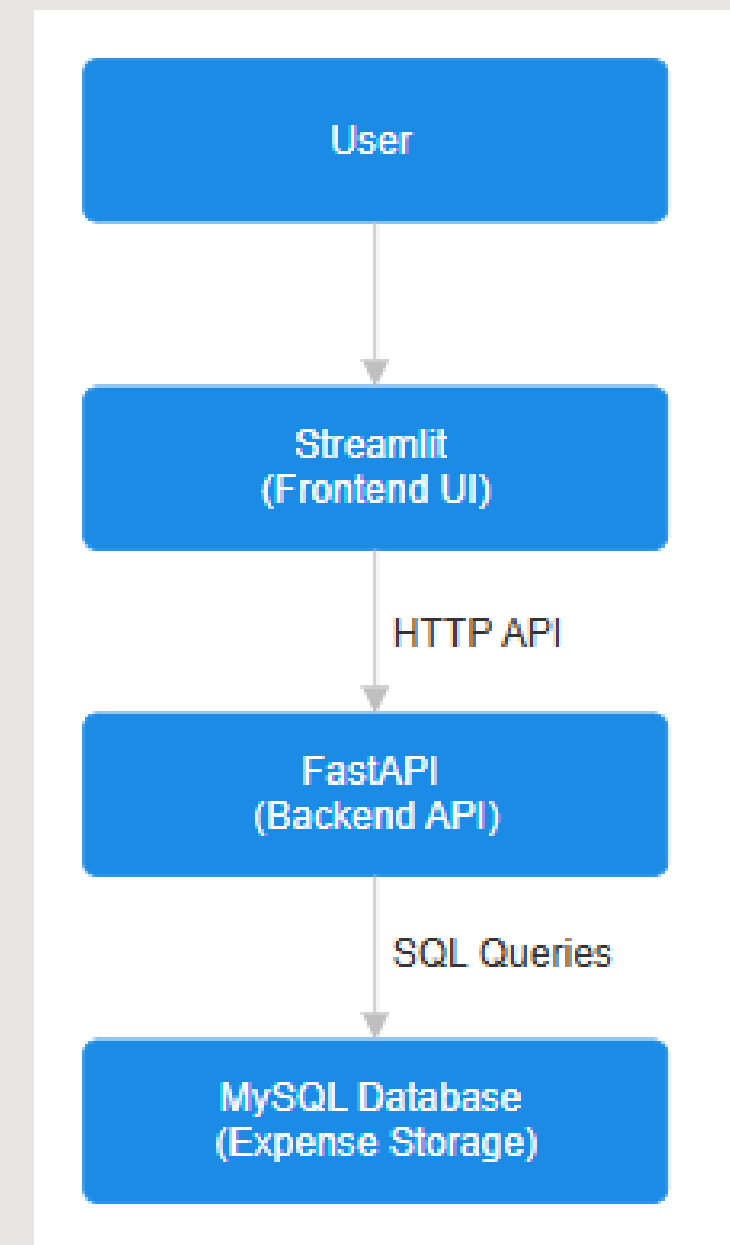

- Manually recording daily expenses is time-consuming and error-prone.
- Users often lack visibility into their monthly spending patterns.
- Categorizing and analyzing expenses using spreadsheets is not intuitive.
- No centralized platform to track, update, and visualize spending efficiently.
- Difficulty in identifying areas of overspending or optimizing budgeting habits.

Project Objectives

- Build a user-friendly web app for recording and managing daily expenses.
- Categorize expenses and visualize spending patterns across time and categories.
- Provide actionable insights through interactive and intuitive dashboards.
- Ensure smooth and responsive performance using a FastAPI backend.

System Architecture

- User Input (Add/Update/View expenses)
- Frontend: Streamlit for forms and visualizations
- Backend: FastAPI for processing requests, validations, and serving data
- Database: MySQL for persistent storage

Tech Stack

- Frontend: Streamlit
- Backend: FastAPI
- Database: MySQL 8.0+
- Other Tools: Pandas, Plotly, Uvicorn, Pydantic
- Testing: Pytest
- Logging: Structured logging using Python's logging module

Key Features & Dashboards

- Core Functionality
 - Users can add, update, and view their daily expenses.
 - Expenses are categorized into types like Food, Rent, Travel, etc.
 - Fully functional REST API backend via FastAPI.
- Powerful Dashboards for Financial Insights
 - Category-wise Analysis
Visualize how spending is distributed across categories in a given date range.
 - Monthly Expense Trends
Track and compare monthly totals to identify changing habits.
 - Daily Expense Summary
View day-by-day spending breakdown for granular insights.

- Other Highlights

- Structured logging for backend monitoring and debugging.
- Unit-tested backend for enhanced reliability.
- Fully local and extensible architecture.

Application Screenshots

- Add/Update Expenses Page
 - Allows users to add or update up to 5 expenses for a selected date.
 - Each expense entry includes:
 - Amount
 - Category
 - Notes
 - Simple, form-based layout using Streamlit.

Expense Tracking Dashboard

+ Add / Update Expenses Analytics by Category Analytics by Month

Add or Update Your Expenses

You can add up to 5 expenses for the selected date.

Choose Date
2024/08/05

Daily Expenses

Expense #1

200.00 - + ☒ Rent ☐ Food ☐ Shopping ☐ Entertainment ☐ Other Shared rent payment

Expense #2

40.00 - + ☐ Rent ☒ Food ☐ Shopping ☐ Entertainment ☐ Other Snacks

Expense #3

75.00 - + ☐ Rent ☐ Food ☐ Shopping ☒ Entertainment ☐ Other Theater tickets

Expense #4

100.00 - + ☐ Rent ☐ Food ☒ Shopping ☐ Entertainment ☐ Other Books

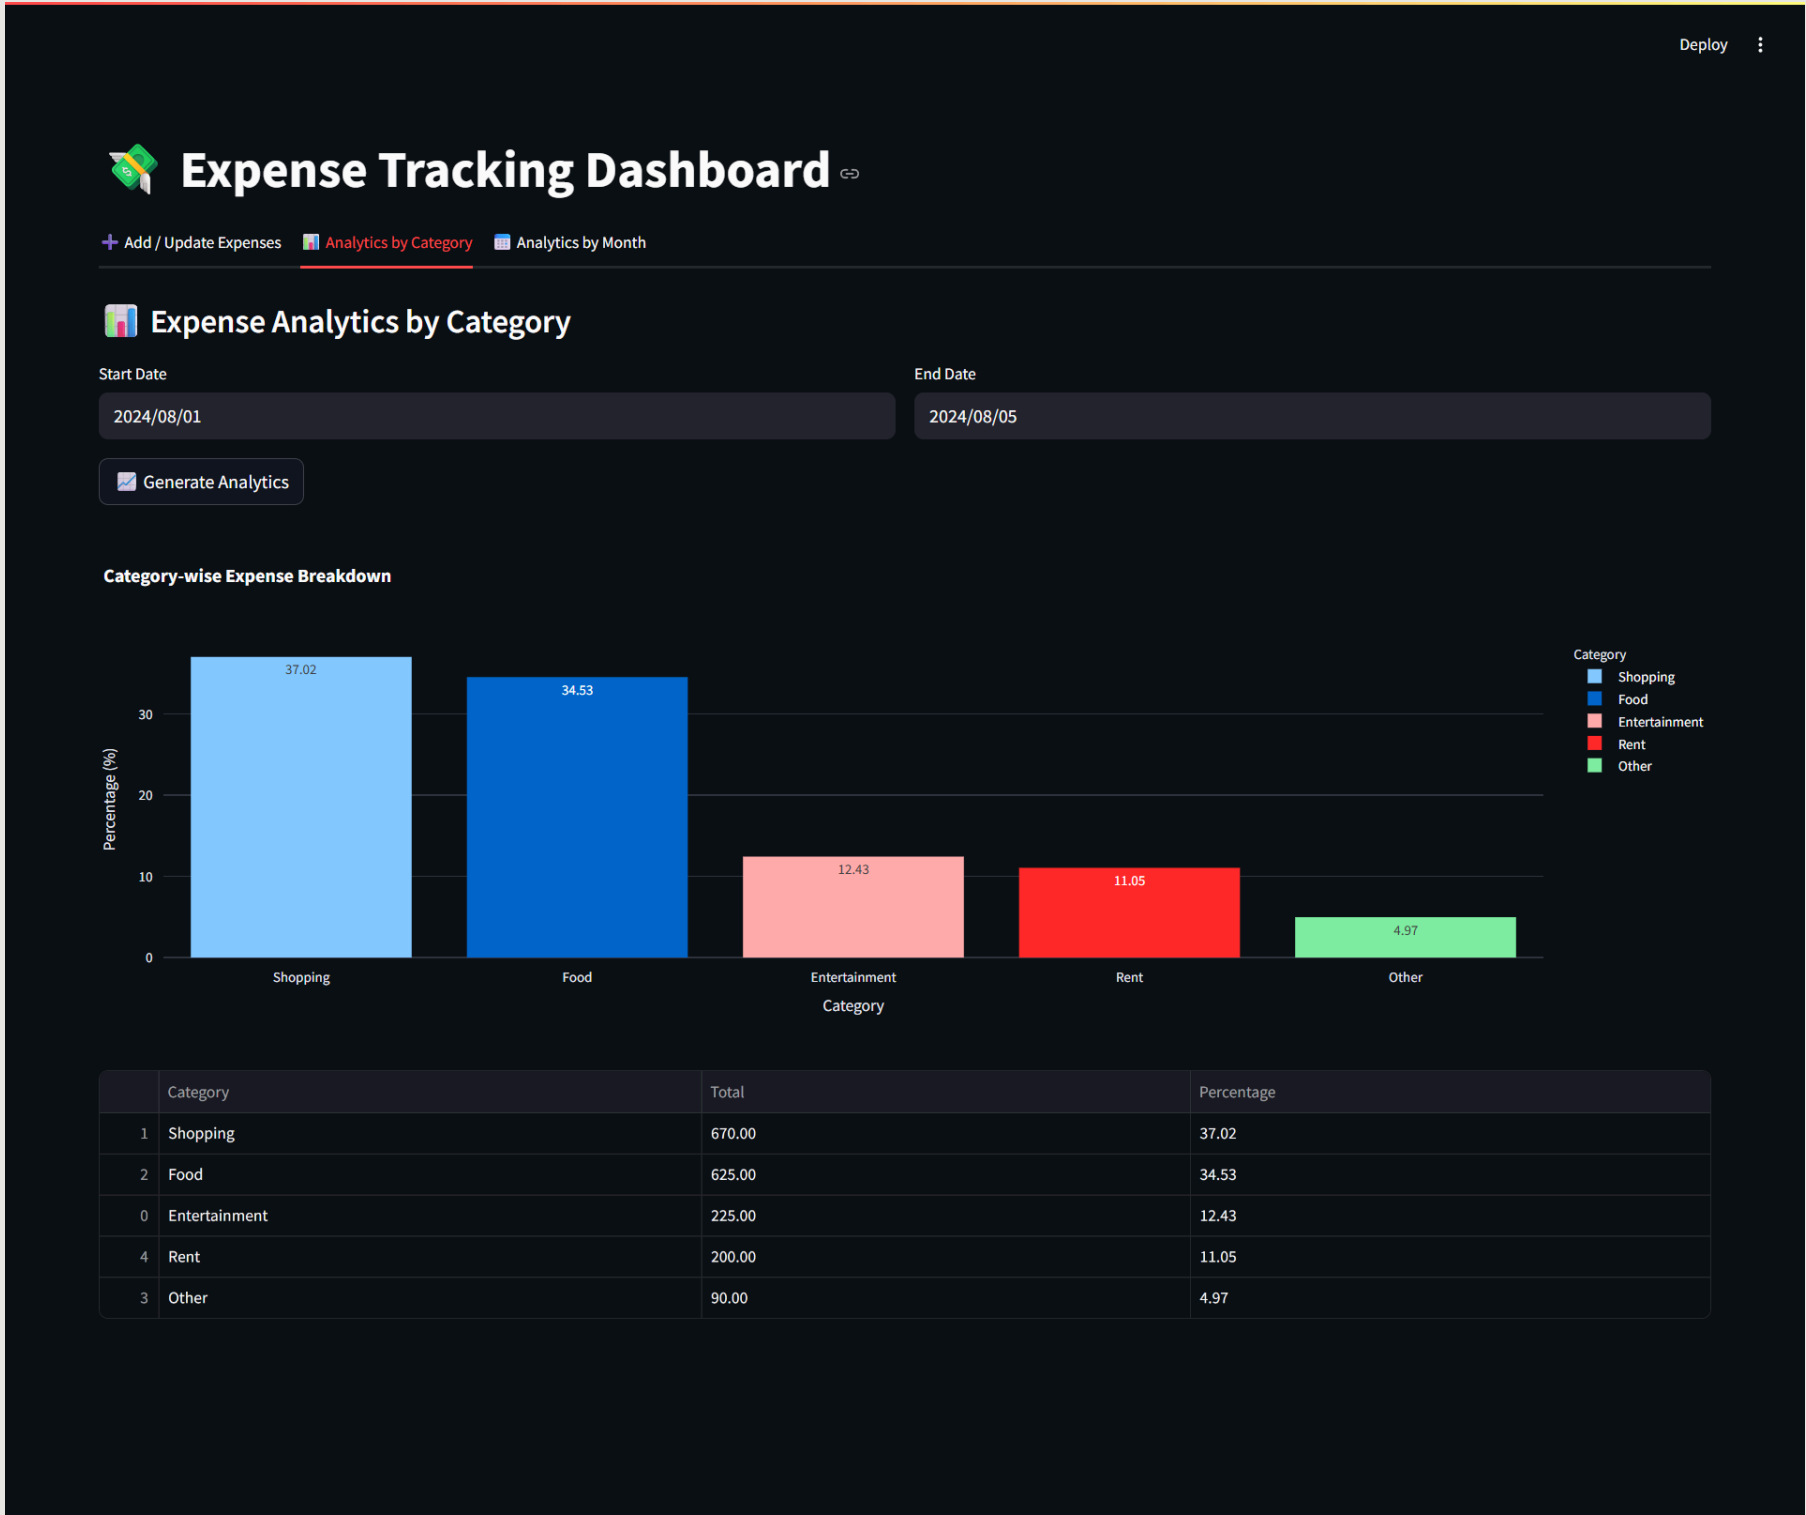

Expense #5

15.00 - + ☐ Rent ☐ Food ☐ Shopping ☐ Entertainment ☒ Other Miscellaneous

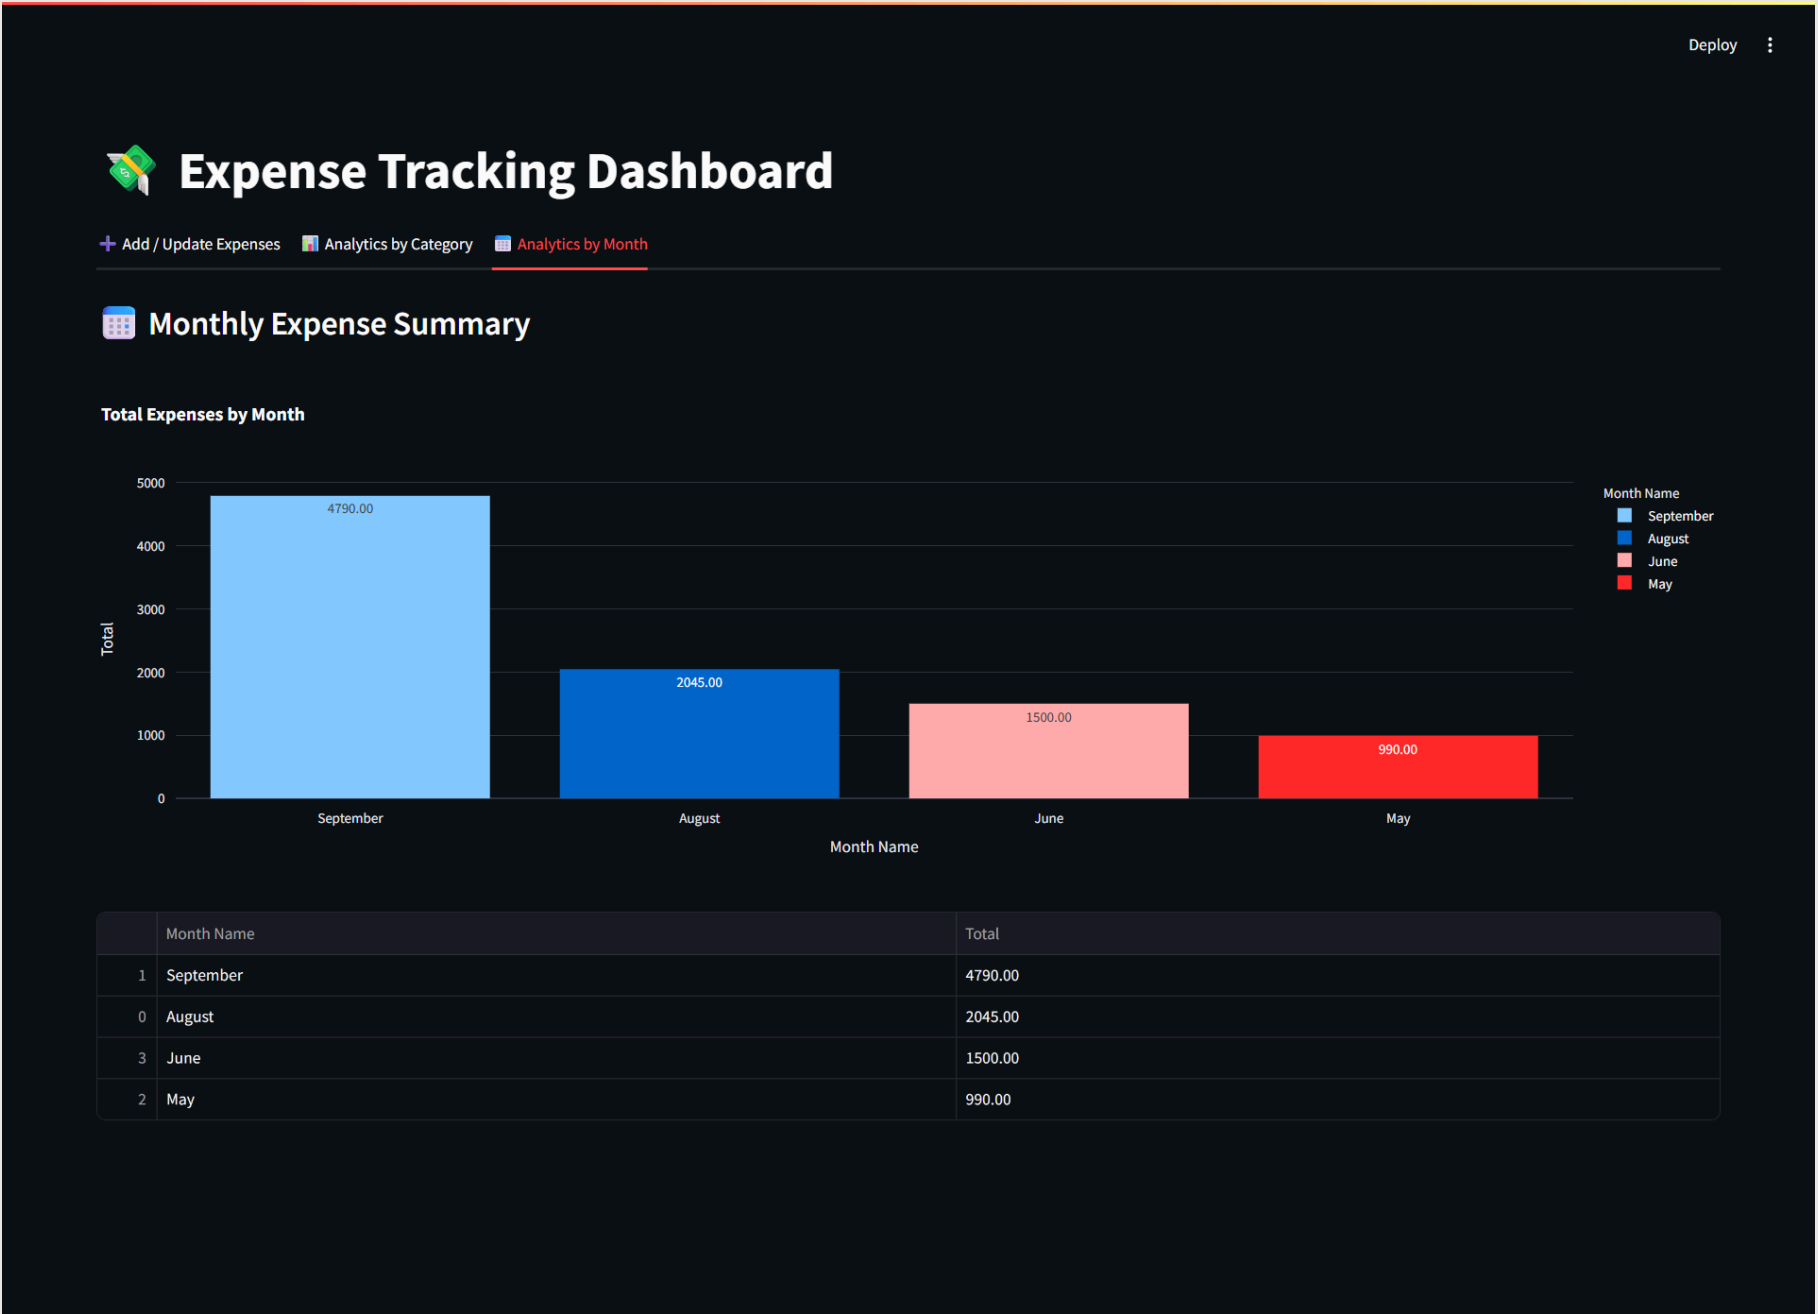

Save Expenses

Expenses updated successfully!

- Category-wise Analytics
 - Displays a visual breakdown of expenses across categories.
 - Supports filtering by a custom date range.
 - Helps users identify spending habits across categories like Food, Rent, Shopping, etc.

- Monthly Expense Trends
 - Shows aggregated monthly spending across all categories.
 - Useful for tracking long-term financial patterns.
 - Visualized using bar or line charts for clarity.

PROJECT SUMMARY

- Developed a full-stack web application to simplify expense tracking.
- Used Streamlit for a clean, interactive frontend experience.
- Built a FastAPI backend to manage expenses and analytics efficiently.
- Enabled users to add, update, and visualize expenses by category and month.
- Integrated structured logging and unit testing for robustness.
- Designed with modularity and future extensibility in mind.
